

Chest X-ray AI Project Update

Progress update on our AI initiative for lung disease detection

What We Are Doing

- Our goal is to leverage AI for **faster diagnosis** of lung diseases from X-ray images, enhancing support for physicians in their decision-making processes.
- By implementing advanced algorithms, we aim to significantly reduce diagnosis time, thereby improving patient outcomes and streamlining healthcare workflows.

Dataset Overview and Updates

Our dataset now includes disease labels and bounding boxes, with a new area column to enhance analysis. This will improve accuracy in detecting lung diseases from X-ray images.

Exploratory Data Analysis Overview

```
# === Part 5: Filtering examples ===  
big_boxes = df[df["area"] > 50000]  
print("Large boxes:", big_boxes.shape)
```

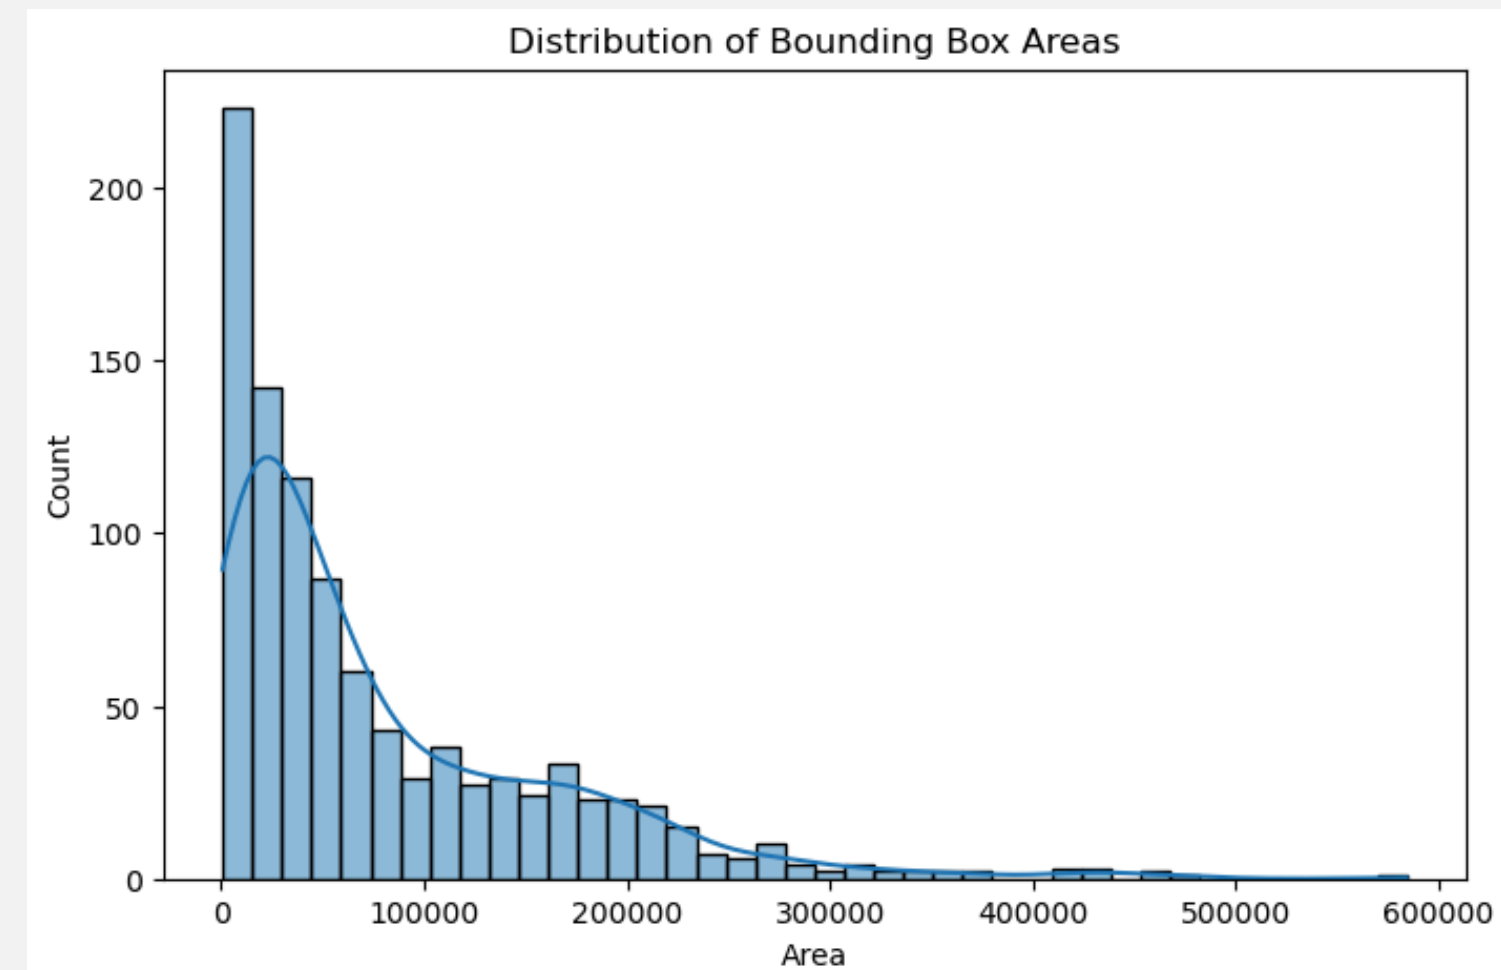

```
small_boxes = df[df["area"] < 5000]  
print("Small boxes:", small_boxes.shape)
```

```
multi_labels = df.groupby("Image Index").size()  
print("Images with multiple findings:", (multi_labels > 1).sum())
```

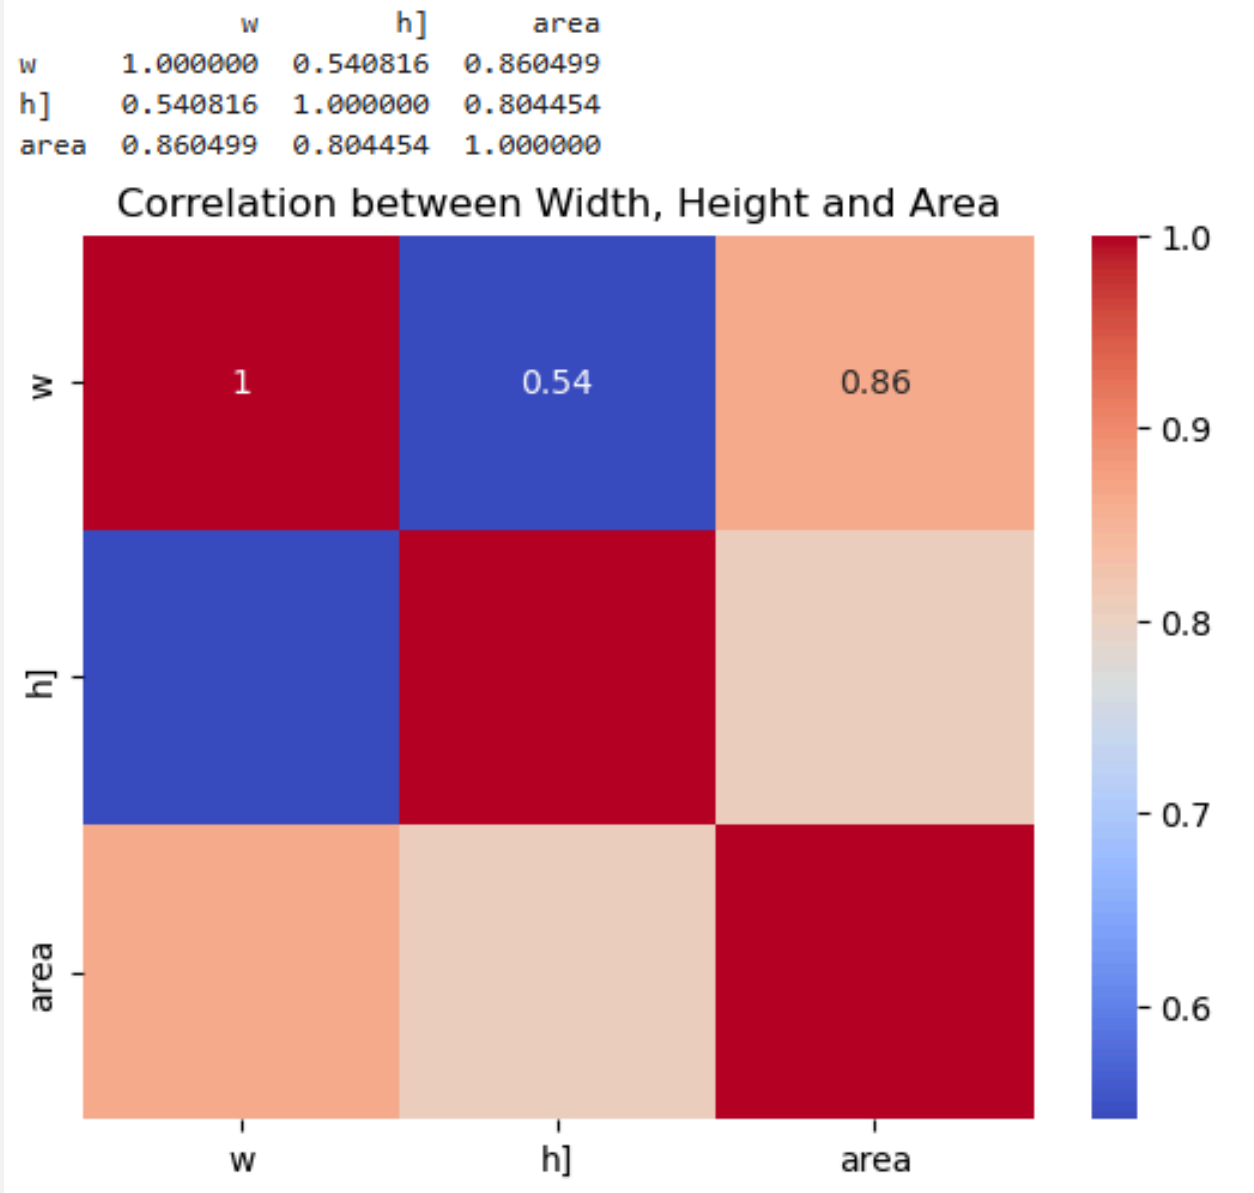

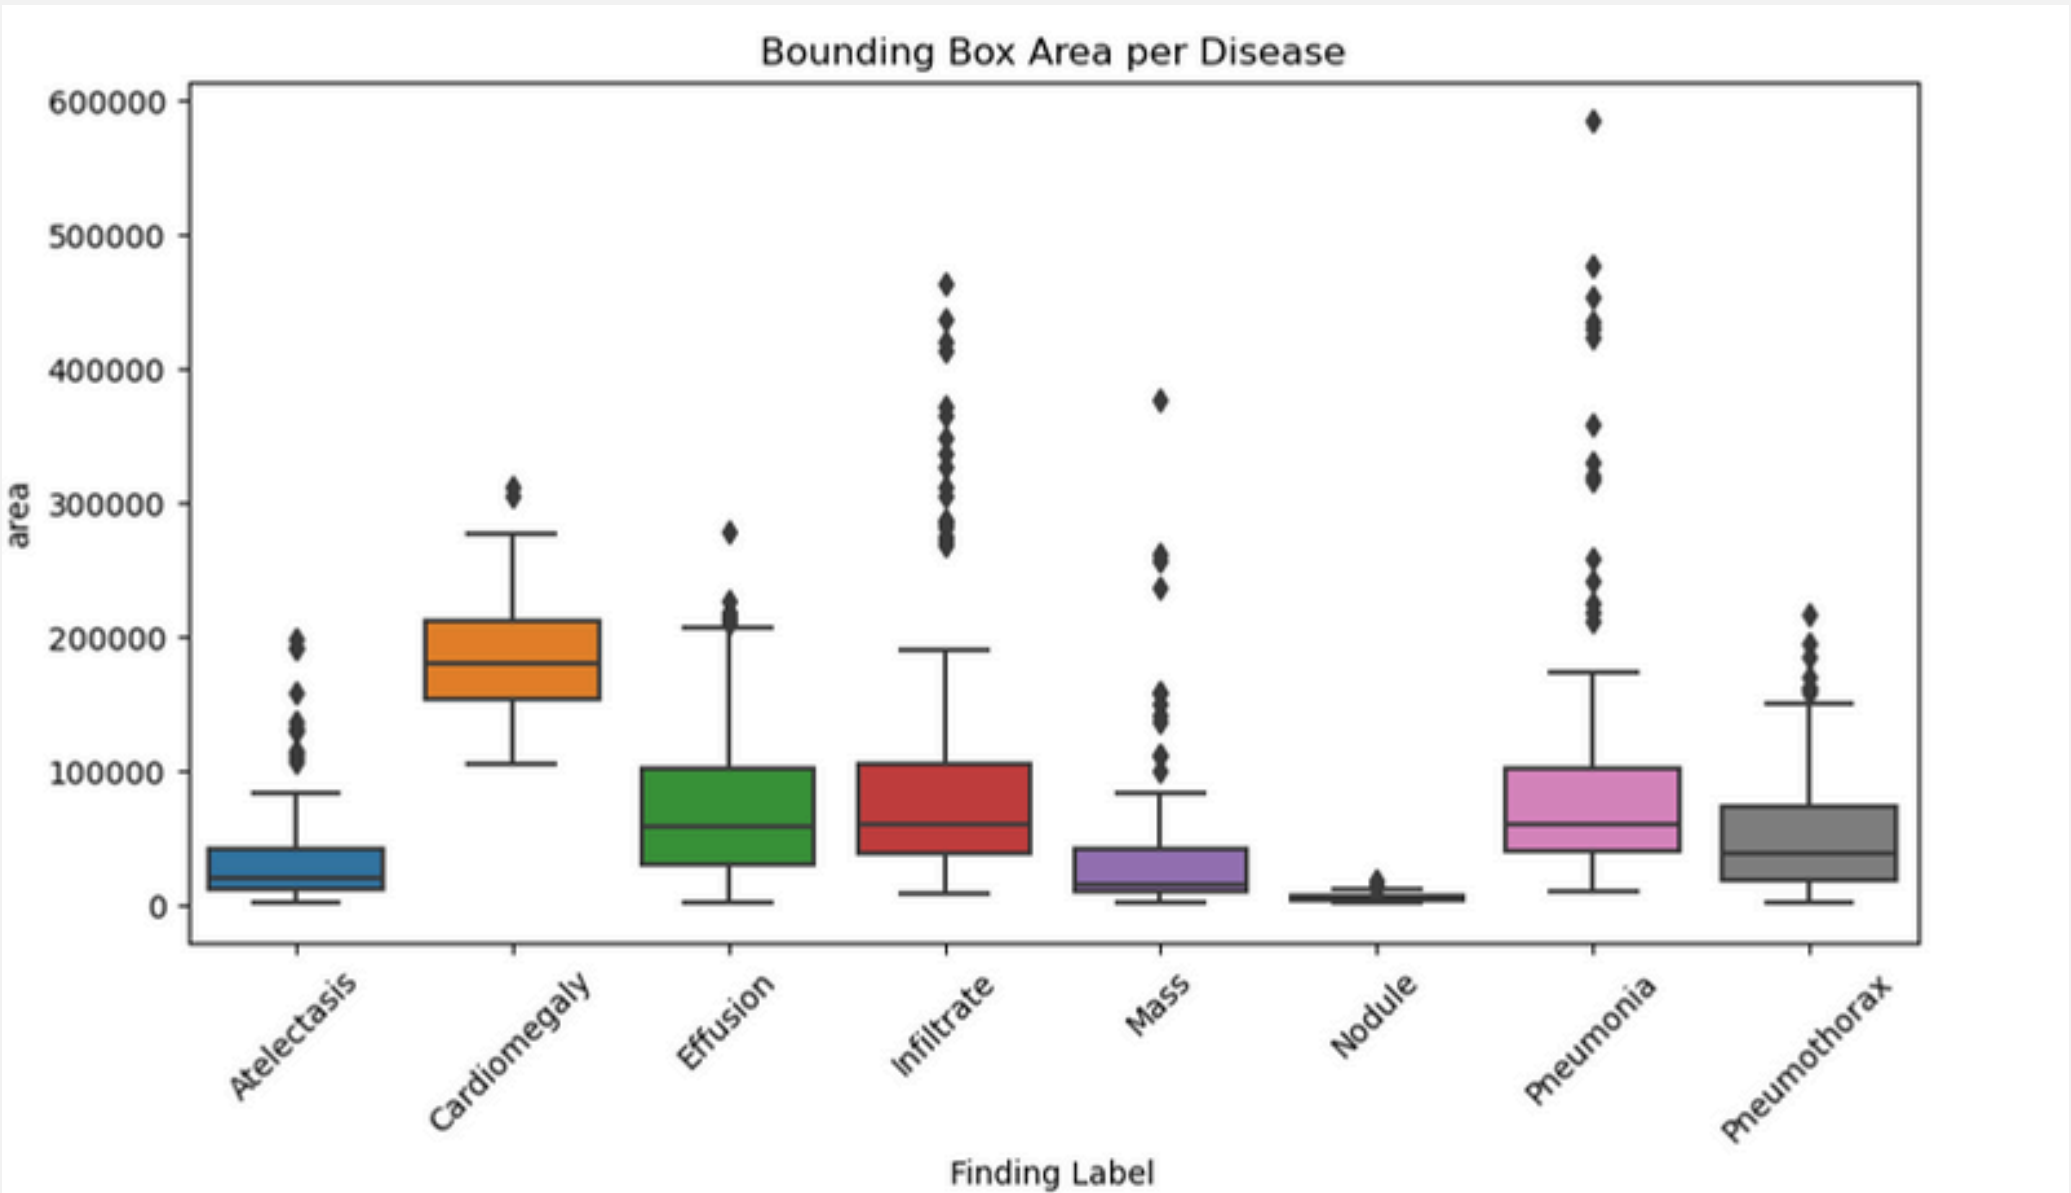

Large boxes: (473, 10)

Small boxes: (60, 10)

Images with multiple findings: 93
